

# Grower's IPM Guide for Florida Tomato and Pepper Production

The IPM Florida office has been assembling an IPM decision making resource for Florida's pepper and tomato industry. We have compiled information into an interdisciplinary, comprehensive resource that will direct the user through the process of IPM planning. This guide will present the use of IPM tactics as means to reduce the risk of epidemics, conserve chemistries against resistance and reduce overall production costs. If you have any questions about material in this guide please feel free to contact individual authors (contact information is listed on individual pages) or Dr. Jennifer Gillett via email [gillett@ifas.ufl.edu](mailto:gillett@ifas.ufl.edu) or phone (352)392-1901 x 122.

**We look forward to receiving your comments.**

## [Table of Contents](#)

**Chapter 1-** Introduction WHY IPM?

**Chapter 2-** Tomato and Pepper Production in Florida

**Chapter 3-** Soil and Nutrient Management

**Chapter 4-** Pest Management

**Chapter 5-** Disease Management

**Chapter 6-** Weed Management

**Chapter 7-** Cultural Controls & Physical Controls

**Chapter 8-** Biological Control

**Chapter 9-** Chemical Control

**Appendix 1:** Vegetable Pest & Disease Hotline

**Appendix 2:** Producer Soil Test Information Sheet

**Appendix 3:** Calibration of Chemical Applicators Used in Vegetables

**Appendix 4:** Weed-Herbicide Interaction Table

**Appendix 5 :** IRAC - Mode of Action List - Insecticides

- [Insecticide Resistance: Causes and Action](#)
- [Insecticide and miticide mode-of-action classification \(v.5.1, September 2005\)](#)

**Appendix 6:** FRAC - Mode of Action List - Fungicides

**Appendix 7:** HRAC - Mode of Action List - Herbicides

**Appendix 8:** National Pest Alert - Tospoviruses
