

### Using soap and water has many benefits:

- It is cheaper and safer to use than pesticides.
- It immobilizes insects so they can be cleaned up easily.
- It cleans up the chemical signals insects use to communicate.
- It cleans up any food that is available to the insect.
- It removes any insect allergens that may be present.

For free pest management services, fill out a work order or contact the UF Department of Housing and Residence Education.

## IPM Cleaner Solution

It is the goal of the Department of Housing and Residence Education to reduce both pest numbers and the amount of pesticides used to make the campus a healthier place to live.

Housing has taken many steps to reduce the amount of pesticide on campus, so we ask that residents also contribute to our goal.

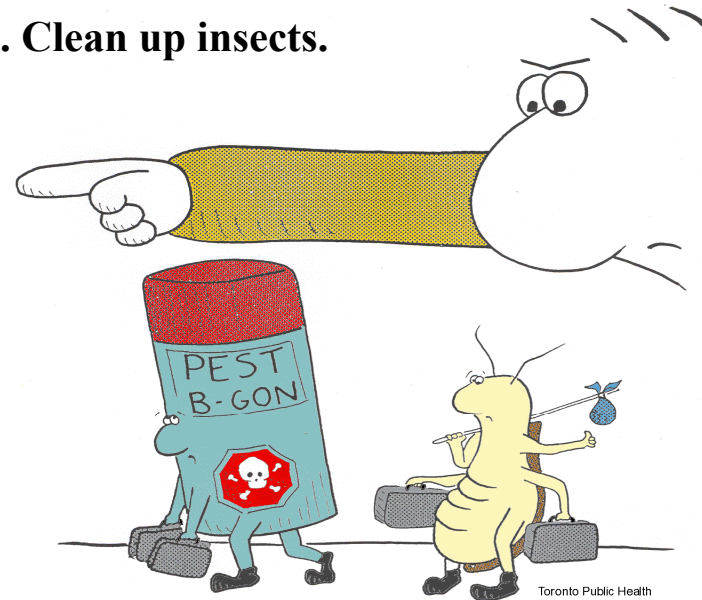

Residents can help by reducing the use of store bought pesticides, such as ant and cockroach sprays or bug bombs.

Instead of using store bought pesticides, reduce the risks of pests and pesticides by using IPM Cleaner Solution!

## Directions:

1. **Remove the lid of the provided “IPM Cleaner Solution” spray bottle.**
2. **Pour in liquid dish detergent to the 2 oz. line at bottom of bottle.**
3. **Add water to the 30 oz. line at top of bottle.**
4. **Replace lid and shake gently.**
5. **Clean up insects.**

**Sprayed surfaces may be slippery when wet.**

**Never use “IPM Cleaner Solution” to clean up wasp, yellow jacket, or bee nests.**
