Grower’s IPM Guide for Florida Tomato and Pepper Production

This comprehensive, interdisciplinary resource guides the user through the process of planning a crop with up front decisions about pest and disease prevention and management. It presents optional production methods and IPM tactics that can reduce the risks of insect outbreaks, disease epidemics, resistance to pesticides and associated costs. The overall purpose of the guide is to increase the profitability of growing tomatoes and peppers while protecting human health and the environment.

The project to produce a Grower’s IPM Guide for Florida Tomato and Pepper Production succeeded due to the partnership that was created to assemble a complete set of IPM resources for planning pest management at the beginning of each crop. This partnership included county extension faculty, extension specialists, crop consultants, tomato and pepper growers, and other pest management experts. Norm Leppla and Barbra Larson prepared the grant proposal that was funded by the USDA, CSREES, Pest Management Alternatives Program (grant # 2003-34381-13593), Monte Johnson, Program Director, PMAP. Charles Mellinger, Glades Crop Care, Inc. was a formal cooperator because of his expertise in managing pests of tomato and pepper. The Florida Fruit and Vegetable Association advocated the project and encouraged its completion. Barbra Larson led the initial phase of the project before becoming Coordinator, UF, IFAS Florida Yards and Neighborhoods. We thank especially the section editors, authors of individual topics, and those who reviewed the entire guide: Dan Botts and Mike Aerts, Florida Fruit and Vegetable Association; Charles Mellinger and Steve Hoak, Glades Crop Care, Inc.; Kevin Seitzinger, Gargiulo Farms; Wes Roan, Six L’s; and Steve Olson and Gene McAvoy, UF, IFAS. Jane Medley designed the cover, Joyce Merritt helped with final production and organization of the appendix material, and Esther Dunn conducted grower interviews. During the more than 3-year effort to produce this guide, assistance was provided by Rebecca Baldwin, Angela Vincent and several other staff members and students. The UF, IFAS statewide IPM program is funded by USDA, CSREES, IPM, Mike Fitzner, Director, Plant and Animal Systems, and administered by Larry Arrington, Dean for Extension and Director, Florida Cooperative Extension Service and Joan Dusky, Associate Dean. John Capinera, Chairman, UF, IFAS, Entomology and Nematology Department provided considerable encouragement and guidance.

## Grower’s IPM Guide for Florida Tomato & Pepper Production

### Contents

- Acknowledgements ii
- Table of Contents iii

### chapter one~ Introduction

- IPM Principles 1
- IPM Past, Present & Future 2
- Developing an IPM Plan 3
- Project Objectives 4

### chapter two~ Tomato & Pepper Production

#### Unique Challenges to Growing Vegetables in Florida

- Weather Events 5
- Poor Soils 6
- Pest and Disease Pressure 6
- Labor 7
- Development and Urban Sprawl 7
- Regulatory Issues 7

#### Cultivar Selection 8

- Tomato Cultivars for Florida 10
- Round Tomatoes 10
- Roma Tomatoes 11
- Cherry Tomatoes 11
- Grape Tomatoes 12

- Pepper Cultivars for Florida 13

#### Resistant Cultivars 14

- Don’t Rely on Resistance Alone 14

#### Types of Resistance 14

### chapter three~ Soil & Nutrient Management

- Best Management Practices (BMPs) 15
- Soil Types and Production Systems 17
- Irrigation 18
  - Methods of Irrigation 18
  - Irrigation Schedule 20
  - Improving Efficiency 20
  - Flooding 22
- Fertilization 23
  - Nutrient needs for Tomato & Pepper 23
  - Supplemental Fertilizer Applications 23
  - Micronutrients 23
  - Table of Fertilizer Recommendations - Tomato 24
Contents, cont.

Table of Fertilizer Recommendations - Pepper 25
N Rate Recommendation for Grape Tomato 26
Nutrient Deficiencies 26
Sampling and Diagnostic Tools 27
  What is a “Credible” Research Institution? 27
  How to Choose a Soil Testing Lab 27
  Water Sampling for Drip Irrigation 27
  Petiole Sap Testing 28
  Whole Leaf Analysis 28
  Record Keeping 29
  References 30
Cover Crops 33
  Steps to Success 33
  Benefits of Cover Crops 33
  Selecting a Cover Crop 33
  Cover Crop Selection Checklist 34
  Matching Production System and Cropping Cycle 34
  Avoiding Problems 35
  Description of Different Cover Crops 36
Compost and Manure 37
  Steps to Success Using Compost 37
  Benefits of Compost and Manure 37
  Nutrient Release 39
  How and When to Incorporate 39
  How to Calibrate a Compost Spreader 39
  Avoiding Problems 40
  Sources of Compost and Manure 40

chapter four ~ Pest Management

Monitoring
  Action Thresholds 41
  Pest Outbreaks 41
  Why All Growers Should Scout 42
  How to Scout 42
  Sampling for Pepper 42
  Sampling for Tomato 42

Featured Pests
  Green Peach Aphid 43
  Beet Armyworm 45
  Broad Mite 47
  Tomato & Tobacco Hornworm 49
  Vegetable Leafminer 51
  Cabbage & Soybean Looper 53
  Mole Crickets (Tawny & Short Winged) 55
  Pepper Weevil 57
  Tomato Russet Mite 59
Contents, cont.

Southern Armyworm 61
Two Spotted Spider Mite 63
Stinkbugs & Leaffooted Bugs 65
Florida Flower Thrips 67
Melon Thrips 69
Tobacco Thrips 71
Western Flower Thrips 73
Tomato Fruitworm (Corn Earworm) 75
Tomato Pinworm 77
Yellowstriped Armyworm 79
Sweet potato/ Silverleaf Whitefly 81
Whitefly, Biotypes Q 83
Whiteflies, TYLCV & Insecticide Resistance 84
Southern Plant Diagnostic Network 87
Pest Seasonality Charts 88
North Florida 88
Southwest Florida 88
West Central Florida 89

Chapter 5~ Disease Management

Integrated Control
  Correctly Identify Pathogen 91
  Sanitation 91
  Nutrient and Water Management 92
  Chemical Control 92
Disease Seasonality Charts 93
Featured Diseases
  Anthracnose of Pepper 95
  Bacterial Spot 97
  Bacterial Wilt 99
  Early Blight of Tomato 101
  Fusarium Crown and Root Rot of Tomato 103
  Gray Mold and Ghost Spot 105
  Late Blight 107
  Tomato Little Leaf 109
  Nematode Management 111
  Phytophthora Blight of Pepper 113
  Pythium Damping-off, Root and Stem Rot 115
  Southern Blight 117
  Target Spot 119
  Tomato Spotted Wilt Virus 121
  Tomato Yellow Leaf Curl Virus 123
  Verticillium Wilt 125
  Wet Rot 127
  White Mold 129
Disorders of Pepper
   Blossom End Rot 131
   Sunscald 132
   Misshapen Fruit 133

Disorders of Tomato
   Blossom End Rot 135
   Catfacing 136
   Cracking & Graywall 137
   Internal White Tissue & Irregular Ripening 138
   Pox and Fleck & Puffiness 139
   Rain Check & Sunscald 140
   Thrips Damage & Zebra Stripe & Zippering 141

Postharvest Diseases of Tomato 142
   Bacterial Soft Rot 145
   Sour Rot 147
   Rhizopus Rot (Fungal Nests) 149
   Black Mold and Rots 151
   Buckeye Rot and Late Blight 153
   Gray Mold (Botrytis Fruit Rot) 155

---

Chapter 6 ~ Weed Management

Weed Management
   When to Manage Weeds 157
   Critical Weed-Free Periods 157

Classification of Weeds 158

Featured Weeds
   Alligator Weed 160
   Palmer Amaranth 160
   Spiny Amaranth 161
   Bermudagrass 161
   Smooth Crabgrass 162
   Large Crabgrass 162
   Dodder 163
   Eclipta 163
   Florida Pusley 164
   Goosegrass 164
   American Black Nightshade 165
   Purple Nutsedge 165
   Yellow Nutsedge 166
   Livid Amaranth 166
   Common Purslane 167
   Common Ragweed 167
   Spreading Dayflower 168
   Smooth Pigweed 168

Non-chemical Controls 169
Chemical Controls / Herbicides 171
Implementing Control 172
